

## MASTER HALCO, <br> For all your fencing needs

Since 1961, Master Halco has been North America's leading manufacturer and wholesale distributor of perimeter security and fencing. Having 53 locations throughout the United States and Canada allows us to provide you with local inventory and service. Being local allows us to offer quick, dependable deliveries of a broad mix of fencing products. And with us being near by, we can help you manage your inventory by ordering what you need when you need it. Our full line of products includes agricultural, vinyl, wood ornamental and chain link fences and gates for residential, commercial, industrial and high security applications.

## Agricultural Fencing Introduction

Good fencing presents barriers to restrict animal movement or mark boundary lines. Barriers can be physical, psychological or a combination of both. Physical barriers consist of enough materials of sufficient strength to prevent or discourage animals from going over, under, or through fences. Psychological barriers utilize negative reinforcement to discourage animals from challenging a physical barrier of inferior strength. Traditional livestock fencing materials include barbed, woven, mesh, and electrified wire or combinations of these materials.

The type of fencing needed for livestock confinement depends on several factors including animal species, age, breed and production system. Beef cattle on a controlled grazing system have different fencing needs than horses on a recreational pasture. Permanent boundary or division fences require different fencing materials than fences for temporary paddocks. Fencing type and materials influence the cost, lifespan, and function of the fencing system.

## Fence Types

## CATTLE

Barbed wire and woven wire fences have traditionally been used for cattle. Four or five-strand barbed wire fences are adequate for cattle. Heavyweight and extra heavyweight woven wire fences with one or more strands of barbed wire above the fence are excellent for cattle. Heavy wire panel fences are highly recommended for cattle-handling facilities. Fenceheightshould be at least 60 inches to preventescape. Fences should also be clearly visible to reduce stress on the animal and to enhance movement through the facility.

## HORSES

Visibility is the mostimportant characteristic of horsefencing. Poorly visible fences such as high-tensile and barbed wire fences should not be used with horses; the animals could incur severe injuries ifthey become entangled in fence wires. "S" or Square Knot Horse Fence is highly recommended for horses.

Woven wire fencing with openings less than 4 inches are suitable for horses. A single one inch x sixinch board is recommended to be placed at the top of the fence to increase visibility.

## SHEEP AND GOATS

Barbed wire fences have typically been used for sheep and goats. However, these fences are not recommended for sheep since barbs pull the fleece. Furthermore, barbed wire fences do not effectively confine goats if moderate grazing pressure is applied to the fenced-in area. Heavyweight or extra-heavyweight woven wire fences are excellent for non-horned sheep and goats. Fence heightshould be at least 39 inches to prevent animal from climbing over the fence and may need to be higher depending on the breed to be confined. Mesh wire fences also make excellent fences for non-horned sheep and goats. Temporary fencing is not recommended for sheep or goats, since they can easily escape.

## SWINE

Barbed wire and cable fences are not effective for swine confinement. Woven wire fences with one or morestrands of barbed wire (placed along the ground to discourage rooting) provide good swine control. Medium and heavyweight woven wire fences with small openings are excellent for restraining swine. Maximum fence height should be 54 inches. Fences built close to the ground prevent swine from escaping by rooting underneath the fence.

## Wire Information

Steel wire longevity depends on the type and thickness of protective coating around the wire. Zinc (galvanize) is commonly used to cover steel wire to protect it from rusting. The more zinc per square foot, the more resistant the wire is to rusting. ASTM has established "classes" of zinc coatings for steel wire based on the number of years that galvanizing delays wire rusting under the different climate conditions. (see Table 1).

## TABLE 1

Approximate years of protection given steel wire by Class I and Class III galvanizing.

|  | DRY CLIMATE |  | HUMID CLIMATE |  |  <br> INDUSTRIAL CLIMATE |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Fence Product Lines

## ELECTRIC FENCE WIRE

Our electric fence is manufactured with an extremely strong, smooth wire to resist breakage overlong distances. These products come in spools of 17, 14 and 12.5 galvanized wire gauges in quarter and half-mile lengths. Electric fence is ideal for added security on an existing fence or as a low-costtemporary or permanent fencealternative.

| Item\# | Description 1 | Description 2 |

| 011276 | $121 / 2 \mathrm{GA} \mathrm{HI}-$ TEN Electric Fence Wire | 200,000PSI - Class 3-4000' coil |

1,320 Feet $=80$ rod $\quad$ A05 $=$ treatment equivalent to Class 3 zinc coating - meets ASTM A 1093

## BARBED WIRE

Barbed wire consists of two strands of wire twisted together with barbs placed at predetermined distances. Continuous twist is the conventional method of manufacturing barb wire and is communally found in $12 \frac{1}{2}$ gauge low carbon varieties.
The barbs on barbed wire are offered in two varieties: 2 point or 4 point. The standard spacing of barbs is 4 or 5 inches.

| Item\# | Description 1 | Description 2 |

## BARBLESS

| Item\# | Description | Description 2 |
| :---: | :--- | :--- |
| 013531 | $12 \frac{1}{2}$ GA Barbless Wire - DOM | Class 1 |

All Barbed and Barbless Wire rolls are 1,320' (80 rod) long.

## FENCE STAYS

Fencestays aid in maintaining the fence shape and spacing plus allows for increased post installation spacing, reducing the number of posts required.

## FENCE STAYS

| 013521 | $48^{\prime \prime} 91 / 2$ GA Fence Stays |  |

## WELDED WIRE FENCE

Welded wire is a desirable, extremely cost effective alternative to other fencing types and systems. It gets its name because the horizontal and vertical wires are welded together at each intersection. For a fraction of the money, you can achieve a cost effective and affordable enclosure for a range of applications. The wire can be attached to existing fencing (such as post and rail) or can be installed independently with knock-in posts. It is great to use in your yard, garden, pool, farm or for deer control.

Welded Wire Panels

## LIVESTOCK PANELS

## (WELDED WIRE PANELS)

These utility fence panels have multiple uses on farms as well as residences. Livestock panels are used for temporary protection and containing livestock. All panels are manufactured using the galvanized-before-welding process, which gives asmooth finish to each line wire and eliminates sharp burrs. A wide variety of spacing configurations makes these panels extremely versatile for many applications, including hog pens, hog traps, dog pens, and many other farm and residential uses.

| Item\# | Description 1 | Description 2 |

## WOVEN WIRE FENCE

Woven wire is available in a variety of heights and configurations. Understanding the product description will help you select the right fence for your job.

## Fence Style Numbers

## (47") HEIGHT IN INCHES

Style\# 1047-6-11 - (11) WIRE GUAGE

Hinge Joint

Hinge Joint

Square Knot

Fixed Knot

This knot is common in agricultural fencing. The knot is formed by wrapping the vertical stay wire pieces around the line wire at each intersection. This design can absorb animal impact without damage. Hinge Joint is the economical knot choice.

Manufacturers Specific Knot Name
Deacero .Hinge Joint Knot
OKSteel. Hinge Joint Knot
Keystone/Red Brand Monarch Knot
Bekaert.
Hinge Joint Knot

## Square Knot

This design uses a separate piece of wire to attach the line wire to the solid stay wire. The Square Knot is smooth to the touch and strong enough to resist animal impact.
The Square Knot gives extra vertical strength to withstand impact from larger animals and prevents buckling or sagging.
Manufacturers Specific Knot Name
Deacero ................................................................Stiff-Stay
OK Steel ..........................................................Max-Tight Knot
Keystone/Red Brand .................................. Square-Deal Knot
Bekaert........................................................................ "S" Knot

## Fixed Knot

This design is top of the line. The Fixed Knot utilizes solid vertical stay wires, which increase the vertical strength of the fence and allow for increased postspacing. The knot is a separate piece of wire tightly wrapped around the line wire and stay wire and cannot unwind under pressure. Fixed Knot is very resistant to animal damage.

## Acreage Guide

Use this guide to help calculate the number of rods of fence required to enclose different field sizes.

(1) 2.5 Acres ( 100 Rods)

2 2.5 Acres ( 100 Rods)
3 5 Acres (120 Rods)

Barbed Wire 80 Rods ( $1,320 \mathrm{ft}$ ) per Roll Field Fence 20 Rods ( 330 ft .) per Roll
$\mathbf{1} \operatorname{Rod}=16.5 \mathrm{ft}$.
$1 / 4 \mathbf{M i l e}=1,320 \mathrm{ft}$. ( 80 Rods)
$\mathbf{1 / 2} \mathbf{~ M i l e}=2,640 \mathrm{ft}$. (160 Rods)
$\mathbf{1} \mathbf{~ M i l e}=5,280 \mathrm{ft}$. (320 Rods)
$\mathbf{1} \mathbf{A c r e}=43,560$ sq. ft.

## Fence and Post Calculations

Use end and corner posts as required. Stretcher posts should be used at approximately 20 -rod intervals for permanent farm fences. Subtract one line for every stretcher post to be used.

RECTANGULAR FIELD

| Acres | Field <br> Length | Field <br> Width | Fence <br> Required | \# Steel Line <br> Posts Required |
